

St. Louis Public Schools System Chooses nFocus Software for Community Solution

PHOENIX, AZ August 11, 2009 St. Louis Public Schools selected [nFocus Software](#) to provide the school district with a registration and outcome based student assessment system for its Community Education Program. nFocus Software will provide St. Louis Public Schools with the ability to assess, improve, and secure additional funding for its community programs and activities.

TraxSolutions, [the participant management system from nFocus Software](#), will enable St. Louis Public Schools to register participants online, track attendance using scanners, manage program data, and build logic models with outcome measurement. The software will also allow the school district to create and share reports to demonstrate and validate the Community Education Program's impact.

"As St. Louis Public Schools' Community Education Full Service Schools add health, mental health, employment, and other services to its existing community education programs, nFocus Software provides a critical means to achieving success. With the implementation of this software, online registration, ID card attendance, robust reporting, and data sharing between organizations can finally become a reality," said Peg Pedersen, St. Louis Community Education Supervisor. "Preparing young people to be 'Ready by 21,' addressing the challenges faced by adults and families, and providing a nurturing environment in which all have the opportunity for success, require that the whole community work together. TraxSolutions provides a powerful tool that keeps the focus on success for all."

"St. Louis Public Schools, like so many of our school districts in America, provide services not only for children during the school day, but for all community residents through programs for adults, youth, and families," remarked Ananda Roberts, President of nFocus Software. "This school district's decision to track and share data and outcomes is a step toward a general recognition, funding, and celebration of our school districts for their often unsung role in community development."

About nFocus Software

nFocus Software is the leading provider of data collection and outcome measurement software to the public sector. nFocus Software's solutions track and measure outcomes for more than 2.5 million children across America and Canada. Our customers include non-profits, Fortune 500 companies and government agencies. Our solutions capably serve organizations ranging from local organizations serving fewer than 100 individuals, to statewide deployments, to the United States Army, where our solutions track the global training and mission readiness of all 1.2 million soldiers.
