

# GeoSuite™

GeoSuite™ is a web-based, multimedia system that provides advanced situational awareness and information sharing for public safety personnel, including police officers, search and rescue workers and first responders. Users **collect, report and share real-time information** for enhanced decision-making and effective response during emergencies, public events or Operations Center management.

## Real-Time Situational Awareness

Users at all levels can view real-time updates on mission events and locations of deployed users.

## Media-Rich Communication

Users can collect and add media-rich information, including images, video and documents, to increase situational awareness.

## Intuitive User Interface

A simple, user-friendly map-based interface allows new users to interact with the system after minimal training.

## Built for Mobility

GeoSuite's mobile app allows users to access all features and collaborate in real time with disparate teams and command centers.

## Adaptable Infrastructure

Whether an existing infrastructure is in place or a new system needs to be developed from the ground up, nFocus Solutions can help determine an optimized, secure solution specifically for your situation.

## Scalable Implementation

From agencies with small teams to large scale enterprise deployments—as your team grows, GeoSuite grows with you.

## User Benefits

### Mission Critical Data

Get instant access to the critical information you need to respond to dynamic situations

### Data Driven Decisions

Provides real-time data from multiple sources, including weather, traffic and infrastructure feeds, to enhance your decision-making power

### Enhanced Collaboration

Easily share information across multiple teams and agencies through multimedia data sharing

### Comprehensive Historical Archives

Quickly access previous incidents, events and other information, including after action reports, training and lessons learned

### Easy to Use

Intuitive user interface, drag and drop capability, social media integration and mobile access help you spend more time focused on your mission

### Get Started Quickly

GeoSuite requires very little training to operate, providing operational capabilities almost immediately

### Protected and Secure

Access and maintain data safely with GeoSuite's secure, cloud-based servers or with local hosting

### Always On

Never lose access to information, even when power or internet access is temporarily lost

### Scales to Fit

From Operations Centers to mobile devices, GeoSuite provides "on-the-go" capabilities to meet your needs

**Whatever your mission or command structure, GeoSuite™ scales to your needs. As your team grows, GeoSuite grows with you.**

## GeoSuite Command

Server-based software that resides within the confines of fixed or mobile operation centers.

## GeoSuite Mobile

Mobile software that can be downloaded to vehicles, laptops, and Android devices—including tablets and smartphones.

## Software Features

### Real-Time Position Location Information

Users at all levels can view real-time locations of deployed users in the field

### Media-Rich Content

Users collect and add media rich information via mobile device or web-based client

### Sensor Information

GeoSuite ingests data feeds from a variety of sensors and sources for complete situational awareness

### Notifications

User tailored ability to receive text or email notifications based on subscriptions to key words, data, users, areas on the map, routes, etc.

### Dynamic Search

Easy to use, customizable search tool allows user to refine searches in any conceivable manner

### Internal Messaging

Users can share geo-referenced information and link other users to ongoing activity without leaving the application

### Mobile Operations

The smallest form factor at the lowest levels of operation

### Collaborative Forums

Users can post documents and hold off-map discussions on critical events
